Use-Case Specification: Adding New Student

1. Adding New Student

1.1. Brief Description

This use case defines the steps of adding a new computer to store it in the database system.

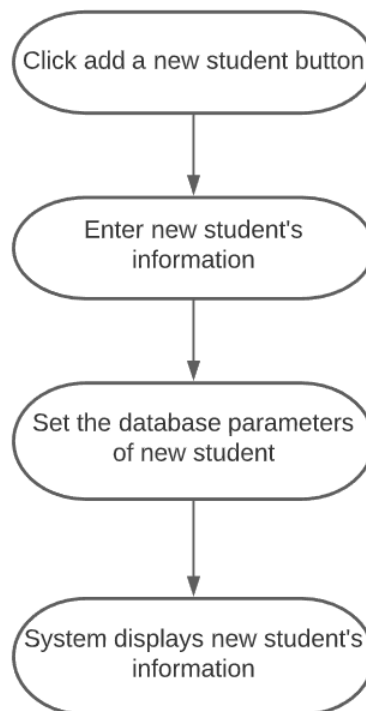

Administrator can easily add a new computer in the database.

1.2. Actor

Administrator.

2. Flow of Events

The system administrator selects to add a new student and enters all information of this student to store in the database system. The administrator sets the database management parameter that holds student information that has just added. The system displays the new student data value and logs the change.

Basic flow of Adding New Student
